

Medicine and Clinical

1. Doctors use imaging (X-rays, CT, MRI) to diagnose and follow treatment.
2. AI helps them (don't) correctly faster and more precisely.
3. Technology is one of the most advanced fields for AI applications today.

Type of images (modalities):

X-ray, Sonar, Ultrasound, CT, MRI, PET, etc.

2D/3D: conventional body images → detect tumors or internal bleeding.

4D: and dynamic data, video, motion.
